                                                                                                                                                                                                Sequence 1, Application US/09962677

Patent No. 6759200

GENERAL INFORMATION:
APPLICANT: Stanton, Jr., Vincent P.
TITLE OF INVENTION: THYMIDINE PHOSPHORYLASE GENE SEQUENCE
TITLE OF INVENTION: THE TREATMENT OF DISEASE
FILE REFERENCE: 11926-015003
CURRENT FILING DATE: 2001-09-24
PRIOR APPLICATION NUMBER: 09/658,659
PRIOR PILING DATE: 2000-06-18
PRIOR PILING DATE: 2000-06-18
PRIOR PILING DATE: 1999-07-19
PRIOR PILING DATE: 1999-07-10
PRIOR PILING DATE: 1998-07-20
NUMBER OF SEQ ID NOS: 16
SEQ ID NO 1
PRIOR PILING DATE: 1998-07-20
PRIOR PILING DATE: 1

1 Sequence 75, Application US/08980326

Patent No. 6703197

GENERAL INFORMATION:

APPLICANT: Gravel, Roy A.

APPLICANT: Gravel, Roy A.

APPLICANT: Gravel, Roy A.

APPLICANT: Gravel, Roy A.

APPLICANT: General Rima

APPLICANT: General Eric

TITLE OF INVENTION: HUMAN METHIONINE SYNTHASE: CLONING, AND

TITLE OF INVENTION: HUMAN METHODS FOR EVALUATING RISK OF NEURAL TITLE OF INVENTION: CARDIOVASCULAR DISEASE AND CANCER

TITLE OF INVENTION: METHODS FOR EVALUATING RISK OF NEURAL TITLE OF INVENTION WHRER: US/08/980,326

CURRENT APPLICANT: 1997-11-26

EARLIER APPLICATION NUMBER: 60/050,310

EARLIER PILING DATE: 1997-06-20

EARLIER PILING DATE: 1997-06-20

EARLIER PILING DATE: 1997-06-20

EARLIER FILING DATE: 1997-06-20

EARLIER FILING DATE: 1997-06-20

EARLIER FALING DATE: 1997-06-20

EARLIER FALING DATE: 1997-06-20

EARLIER FALING DATE: 1096-11-27

NUMBER OF SEQ ID NOS: 75

ENGTH: 3856

IFPE: DATE

FEATURE:

NAME/KEY: variation

LOCATION: (1)...(1265)

OTHER INFORMATION: Coding sequence for mutant methionine synthases:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 13693, Application US/09252991A

Patent No. 6521795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS
FRICK REPLICATION NUMBER: US 60/074,788
PRIOR PELING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 13693
LENGTH: 3795
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3756 GAAGATTTCCAAGGATCAGGTTGAGGATTATGCATTGAGGAAGAACATATCTGTGGCTGA 3815

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARROGANGSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
                                                                                                                                                                                                                                                                                                2476
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2497

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                      1 ggtcacctgtggagagagcacg.........319
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
